

Another successful Metal-Shark™ installation

Company Name: Horizon Wood Products, Kersey, PA

Metal in logs was costing too many dollars in downtime and lost production. The choice was made to purchase a metal detector and the Tectronix, Round Aperture, Metal-Shark™ was the logical choice. Tectronix made the decision to purchase easy for us. They engineered and manufactured a complete module including drives, belt and all support steel. This made the job of installation very simple. Operation of the metal detector began in January 2007 and started up without problems.

Dan Terbovich states, "It is great to feel confident that all our logs are free of metal before they enter the mill."

"We have not hit any metal since installing the Metal-Shark™. Production has increased and down time for saw changes for anything but regular maintenance has been eliminated. Payback will happen very quickly."
